## 摘要

Traditional settlement, composed of complicated, abstract, in-depth space structure, varies with times. It leaves cultural assets as factors to help redevelop local industries, which contributes as a niche to the settlement itself. This article explores the field of eco-museum, traditional settlement, cultural landscape, local industry redevelopment, and strategic planning as a way to propose thoughts, which may incorporate the eco-museum and traditional settlement a redevelopment strategy to the locality. The eco-museum, a concept of community museum including physical facilities and open spaces with locale residential collective memory, is applied within a traditional settlement to trigger the economic, social, and industrial structure change. The authors identify the “eco-museum” may prove a workable strategy to enhance the local competitiveness for a traditional settlement. With the introduction of eco-museum to arise social study, milieu acknowledgement, and cultural facilities, physical performance of local industry redevelopment can be enriched, and thus a niche for local redevelopment within a traditional settlement can be made.
