## 摘要

Professional Construction Management (PCM) presently has become the mainstream abroad in the construction project management. and in recent years also actively promote the professional construction management system, related cases, the use of performance are not significantly PCM. Authorities on how to choose the suitable implementation of project management topics commissioned professional construction management on behalf of the owner, and both want to use professional, specifically to deal with the ability of the project team, but worried the industry by cheap bids and caused to entrust the the PCM management of engineering case, its effectiveness is not as expected, and yet I do not know how to choose the right quality, and project management. By the public works Checker achievements by engineering statistical standard case system, and over the years (five years) quality control and checking scores compare over the years (last five years), winners (gold medal) results, a significant number of occupational injuries and the Lao achievements.
