摘要

The environment on earth is getting worse. And environment problem has become a world wide issue. Our government also senses this problem and funds a “sustainable development committee” to actively initiate the policy of “green architecture” .

This article is going to research the application of green architecture policy which was applied in campus. In education system school always play a very important role. Thus we are going to take campus as sample, through building design, construction and function to analyze how the school combines environment, output and life then turns to a green campus.

關鍵字： green architecture、school buildings、campus planning
