## 摘要

School environment has influence on teachers' teaching and students' acquisition; therefore, school buildings should build up students' positive environmental sensation and reduce negative environmental sensation. It manifests much importance owing to educability, symbolism, the time, and artistry on constructive environment of environmental teaching. Consequently, high-grade school environment has educational effects on changing and influencing unobtrusively and imperceptibly.

Schools should impetus environmental education to fulfill it, advance the quality and depth of environmental education in junior high and elementary schools, and accomplish the educational goal in green school of the environmental sustainable development. Through that beta test in sustainable development cooperates with the teaching content and request in order to create green schools of sustainable development.
