## 摘要

Plan design the school construction closes study effect the student to be really great, can build the high quality learning environment take the student as the main axle campus plan. Facing the serious ecology catastrophe, since childhood studies the stage to start day by day namely to be supposed to take the environment education subject to melt into various domains teaching, but the campus hardware facility matches has adds while the effect. Therefore, the Ministry of Education was positively impels to the recent years to continue forever the campus to move and encourages

national all levels of schools to carry on the campus partial reconstruction, to the time caused the campus environment to draw close to the nature, then achieved the energy conservation reduced the dirt to continue forever the development environment.

The Jushing elementary school in Miaoli County joined the Taiwan green school partner network from 2003 up to now, a session of four year had -odd. In under the entire school teachers' and students' joint effort, the success impetus environment education and the ecology education. The affiliation by continues forever the campus partial reconstruction plan the execution, the teacher to already has the hardware facility plan ecology and the environment education teaching activity, voluntarily researches and develops various types the teaching activity design, eagerly anticipates the schoolchild to become the Earth good citizen which the loving care environment, treasures the resources.
