摘要

The purpose of this study was to survey the internet usage behavior and IAD (internet addiction disorder) prevalence of fifth and sixth graders in the suburb of Chang-hua County in order to determine the significant causes of IAD for young students living in suburb. The results of pilot study are as the followings:

- (1) Comparing with downtown areas, the IAD prevalence was relatively lower for the fifth and sixth graders in the suburb of Chang-hua County.
- (2) The background of students in the suburb of Chang-hua County was significantly different from that of students in downtown areas.
- (3) Although the IAD prevalence seemed be relatively lower in the suburbs, it is worth worrying to recognize the carelessness of parents and the long internet using time of the fifth and sixth graders in the suburb of Chang-hua County when the internet usage is growing more and more indispensable in suburbs as well.
