摘要

Since new public management prevails, local environmental management has been pinned down by the performance too, pursue the economical efficiency figure, as the identification that the local environmental performance is fine. However, environmental management is contracted in the short-term economic benefits and courted concept that leads of a kind of tool of citizen's ballot by the limit, and difficult to break away from the spell of digital management, have fallen into the nightmare, make the environmental governance and sustainable difficult to become real. This research drafts the directional performance of environmental governance, and combine the concept that the paradigm shift with urban governance, probe into environmental governance and sustainable possible route.
