摘要

Studies on the quality of health and leisure activities and the stability of life, shows that Formosa (Taiwan) has the best natural environment. This is challenging for the leaders, especially in the area of human resource management due to the current financial and economic crisis. The leaders question how much people will trust them to break through this plight, to improve the quality of life for the people. The research is based on Yi-Cheng science name classification and explores the Qing Dynasty people prior to the government imperial candidate examinations. The result of the research showed that in E-A-C-D most of the people trust them, especially in C1 - A1 - F3 - D1 - H5 - B1 - F1 - B3 - C2 and E1. The highest percent showed confidence in the imperial candidate. According to the Yi-Cheng science name classification in five elements of Chinese culture regarding human resources management and recreational sports management, it is being used to their advantage and expects that they may find the top managers in Eastern Asia.

關鍵字：Yi-Cheng human resources, Yi-Cheng science name classification, recreational Sports Management, the imperial candidates
