摘要

In Taiwan, population of remote areas is constantly decreasing. The elementary schools in the remote areas might be abolished or consolidated. According to our literature review, abolishment and consolidation of elementary schools might not be the only ways to solve the financial problem of the government. 「Joint school」 in remote areas may be a better alternative. The management strategy of school proposed in this study is based on the related literature and modified according to the interview of five elementary school principals. Then, a questionnaire is designed to survey the attitude of teachers and parents to abolishment and consolidation. From the results, parents and teachers consider that abolishment and consolidation of elementary schools in remote areas will hinder the development of neighboring community, cause out-migration of population and will make school commute of pupils inconvenient and time-wasting. Furthermore, the attitude to the influence of abolishment and consolidation of elementary schools and the recognition of our model do not have significant correlation.

關鍵字 : remote areas, elementary school, school management strategy, joint school.
