摘要

Recently, the globalization expands the economic distance of urban and rural. Although the government strives to reach a balance between regional developments, however, there are still constant criticisms alleging more resources are allocated for the northern region, while less for the southern region. Create urban-rural gap between the quality of the living environment, and resources are mostly concentrated in northern Taiwan. Resulting population urbanization, making southern Taiwan and Northern Taiwan of the development is very different, and the government hopes that the use of regional development to promote regional industries and population distribution, and reducing regional development gap. The objective of this study is to analyze the population and employment of Taipei metropolitan area and Kaohsiung metropolitan area by “economic-based analysis” to provide for government policy-making.
