摘要

As Taiwan's number of higher education institutes growing, graduation from college or university is not a guarantee for employment. Technology universities emphasize on training students with practical knowledge and skills for the requirements of industries. Therefore, lots of universities have established relationships with industries to offer internship opportunities to students. This kind of cooperation provides students with hands-on opportunity and helps them to accumulate the related practice experience fitting to the needs of enterprises.

The aim of the paper is then to study the determinant factors on "Student Internship", based upon method of AHP. The results offer related suggestions for school, students and the enterprises.

關鍵字：student internship, determinants, Analytic Hierarchy Process (AHP)
